Malvertising Sends Malware in Pieces, Then Makes the Browser Build the Executable

A MALVERTISING OPERATION DUBBED

SourTrade is making victims' browsers build the final Windows executable themselves, using a legitimate Bun runtime as its base instead of

serving one complete malicious file from a fixed URL. Confiant, which detailed the campaign on July 23, 2026, said it has operated since late 2024...

Security flaw in Vatican's 'Click to Pray' app leaves over 700,000 global users exposed — app has been leaking user data for over six months and still does

An app linked to the Vatican with hundreds of thousands of users was found to have zero authentication and security. That means anyone can access its backend and siphon users' data, including names, email addresses, and birthdates. While the issue has since been resolved, it remained open for six months (or longer)...
