Finland deploys new system to detect threats to undersea cables — distributed acoustic sensors measure vibrations from the seabed and informs the authorities and operators of suspicious activities

FINNISH COMPANIES AND ACADEMIC

institutions, alongside the Finnish Navy and Border Guards, worked together to develop a system that used existing undersea

cables to detect potential disturbances on the seabed. This system would allow the authorities to respond to any detected anomaly, potentially preventing critical...

Free Apps Are Quietly Turning Smart TVs Into Web-Scraping Proxies for AI

A researcher has reverse-engineered the iOS SDK that Bright Data embeds in consumer apps and documented how it turns devices, including always-on smart TVs, into exit nodes that relay web-scraping traffic for a data business Bright Data markets heavily to the AI industry. The company, the successor to Luminati...
