Binance heist began with fake job interviews and a malicious Homebrew download

BINANCE HAS REVEALED HOW Norh Korean attackers spent months compromising systems and employees with malicious developer software and a fake recruitment process. The intrusions eventually gave hackers access to the exchange’s internal wallet signing systems, enabling the October 29 theft.

Google hasn’t figured out how to make AI pay like its search engine

Search queries are growing at their fastest rate in five years, Google parent Alphabet said in its earnings report last week. However, Google's Search revenue growth slowed to 12 percent year over year in the third quarter, down from roughly 17 percent in the previous quarter. Meanwhile, growth in paid clicks - clicks…

Securing the agentic enterprise with data lineage

A sales representative asks an AI agent for customer pricing, and the agent pulls data from multiple sources: restricted pricing systems, internal communications, and archived quotes. The output looks accurate to the agent, so a second agent uses the data to draft the proposal for the sales rep. No human checks either…
