AI-Found Linux Kernel Flaw Gives Local Users Root, and Can Break a Guest Out to the Host

A flaw in Linux's vhost subsystem lets a local user read and write kernel memory at will and become root across nearly a decade of kernel versions. In one virtualization setup, it lets an untrusted virtual machine write to the host's memory and hijack the program that runs the virtual machine. The bug is tracked as...

Four-Byte Write and Timing Bug Let Researchers Run Code in Windows SmartScreen Enclave

Security researchers ran their own code inside a protected part of Windows that is meant to stay sealed off even when the rest of the computer is taken over. The protected area is a VBS enclave, an isolated slice of memory the operating system uses to guard secrets, and the one they broke into handles passwords for a...

Apple’s HomeView ad is confusing to everyone except parents

Apple's ad introducing its new HomeView smart display is a little unusual. It's fast-paced and unruly, depicting a family of five as they rush through the morning routine. There's yelling and mess, misplaced keys and discarded eggshells. Apple's typical vibe is clean, simple, orderly; this commercial is chaos. But the…
