Malicious npm Package indexed-btree Hid Its Loader in Runtime Code Before Removal

A MALICIOUS NPM PACKAGE named "indexed-btree" has been observed hiding its malicious behavior within application code rather than using lifecycle scripts, indicating

that threat actors are likely shifting tactics in response to recent security controls. "Indexed-btree is a malicious npm package mimicking the legit...

One Hidden Meta Muse Setting Could Let Attackers Turn the AI Assistant Into a Backdoor

Malware already running on a Mac can quietly take over Meta's Muse assistant and use the broad access its owner granted the app, security researcher Patrick Wardle has shown in a proof-of-concept released on September 21. It works by changing a hidden setting so that when the user taps the microphone and dictates a...
