Reed Jobs would rather talk about curing cancer than his last name

WHEN WE LAST SAT down with Jobs at TechCrunch Disrupt nearly three years ago, his firm Yosemite was brand new and biotech was still reeling from its

post-pandemic crash. Now, the venture outfit has a team of 17; a cluster of blockbuster drugs are all losing patent protection in roughly the same window, creating all...

Hotspot temperature sensor on Nvidia's Blackwell gaming GPUs is still accessible if you have access to Nvidia's internal MODS tool — Nvidia RTX 5070 Ti caught throttling at 107°C over poor TIM application

Nvidia decided to hide the hotspot temperature on its RTX 50 series, but internal diagnostic tools, such as Nvidia's own "MODS," can still read it. The resulting data reveals how some GPUs can overheat and throttle easily, which could be why the sensor was kept hidden in the first place.
