PamStealer Uses Fake Maccy Sites and PAM Checks to Steal Mac Login Passwords

CYBERSECURITY RESEARCHERS HAVE FLAGGED a new macOS information stealer called PamStealer that employs a series of clever tricks to infect systems and

siphon sensitive data. The stealer, discovered by Jamf Threat Labs, is distributed as a compiled AppleScript (.scpt) file impersonating Maccy, a legitimate open-source...

Google Disrupts NetNut Residential Proxy Network Spanning 2 Million Home Devices

Google has significantly degraded NetNut, one of the biggest networks that turns home devices into rented relays for other people's traffic. Working with the FBI, Lumen, and others, Google's Threat Intelligence Group (GTIG) said this week it had reduced the network's pool of usable devices by millions. Google...
