iCagenda and Balbooa Forms Joomla Flaws Reportedly Exploited as Zero-Days

THE U.S. CYBERSECURITY AND

Infrastructure Security Agency (CISA) has added two maximum-severity security flaws impacting iCagenda and Balbooa extensions for Joomla

to its Known Exploited Vulnerabilities (KEV) catalog, following reports of zero-day exploitation in the wild. The vulnerabilities, both rated 10.0 on the...

Misconfigured Server Reveals Three Evilginx Phishing Operations Targeting Microsoft 365

An attacker running a live Microsoft 365 phishing operation left a Python web server listening on a public port with directory listing switched on. The command that did it: `python3 -m http.server 8080`, was still sitting in the readable `.bash_history`. From that one lapse, French security firm Lexfo lifted the...

How to Build More Resilient Local-First Applications With AT Protocol Infrastructure

Jake Lazaroff discussed the AT Protocol as a framework for distributed applications beyond social networking. He emphasised a local-first architecture where users maintain data in PDSs while leveraging shared infrastructure for synchronisation and updates. The presentation included experiments showcasing collaborative...
